## MxTunnel Crack Free

MxTunnel is a bit of a hybrid between a Proxy and a Tunnel; it's a proxy that provides some extra security by only allowing access from certain IP addresses. It's also a tunnel through which you can access the Internet, VoIP, and P2P from behind the firewall of your office, without the need to install software on the computer you

---

wish to access the Internet from. This client software can also act as an SSI (Sub Server Interface) and allow you to easily integrate VoIP, P2P, and web services into any program or website that allows SSI syntax. MxTunnel allows the user to set their own username, password, and/or IP to enter the Internet and/or VoIP services and access all their favorite hosts. MxTunnel also supports the use of a virtual private network (VPN). By

---

default, MxTunnel's proxy server is bound to port 80, but the user can change the port in the settings. In addition, MxTunnel's proxy can be configured to block certain websites and/or hosts.

MxTunnel Features:

MxTunnel includes all the features of a traditional proxy server plus some extra features that aren't available in a normal proxy server such as the ability to connect to a VPN (Virtual Private Network) and

---

access the Internet through the firewall of the user's office. The following is a list of features: ✓

- Supports all Internet and VoIP protocols that are currently being used on the Internet (including SIP, SDP, RTP, TLS, DTLS, HTTP, HTTPS, and MMS) ✓
- Allows the user to set their own username, password, and/or IP address to enter the Internet and/or VoIP services and access all their favorite hosts. ✓
- Provides a virtual private network

---

(VPN) service to allow the user to connect to the Internet through a private server in their office or other place of work

- ✓ Allows users to set the port to which the proxy server is bound

- ✓ Supports the use of a server-side interface, or SSI, to allow the user to easily integrate VoIP, P2P

**What's New in the MxTunnel?**

MxTunnel is the easiest way to connect to the Internet without

---

giving up your privacy. MxTunnel allows users to access several Internet resources (sites and services) by simply entering a web address or an IP address in its application. It is used with several VoIP clients such as Skype, Google Talk, Yahoo Messenger and many others, to gain secure access to Internet resources and services. MxTunnel allows users to connect to VPN gateways using standard protocols like PPTP and L2TP/IPsec. It is

---

used to access content by surfers that are otherwise blocked. A unique MxTunnel feature is that it allows users to connect to multiple web resources or Internet gateways in the same interface.

The main features of MxTunnel are: \* Connects to several Internet resources in one interface \* Easily connects to VPN servers \*
